

Supplemental Data for *Observe, Record, Interpret: some examples of teaching sedimentology by distance learning including virtual graphic logs*, Charlie S. Bristow

Department of Earth and Planetary Sciences, Birkbeck University of London, Malet Street, London WC1E 7HX

The 22 outcrop photographs (Supplementary data a - v ) show 5 m of section in the Woburn Sands near Leighton Buzzard in England. Each photograph covers around 30 cm of the section with a at the base and v at the top. Every photograph includes a survey staff marked in cm with decimeter labels for scale (0.1 is 10 cm and 0.2 is 20 cm). The colour of the scale on the survey staff changes every meter from black to red at 1.0 m and 3.0 m, and back to black at 2.0 m and 4.0 m. The pale coloured sands contrast with darker silty-mudstones that pick out sets of cross-strata as well as trace fossils. The photographs are freely available from the data archive at <https://researchdata.bbk.ac.uk/71/> .

To access the photographs scroll down to the 'Digital Data Downloads' section.

There is a small check box that says: 'I agree to abide by the licence attached to the data, and to cite correctly if I reuse the data.' Check that box and a button saying 'Download' will appear. Click the blue 'Download' button and a list of the files that was greyed out will appear in dark red text **LB-a.jpg** through to **LB-v.jpg**. Click on each of the file names and the file will open and can be saved to your own computer.
